Subject: RE: Union Transportation Trail

Hi Marc, the trail surface will be a combination of surfaces. Some areas will be the existing railbed with just vegetation cleared off, some areas will be a stone mix called dense graded aggregate, and lastly some areas will have a hardened stone surface (stone fines mixed with a binder). The Trail is designed to allow equestrian use. Parking lots will have spaces for trailer parking and I tried to design street crossings to allow for horse carriage access. The horse community is an important user group for the Trail
